Shining Light in the Darkness

“We have all known the long loneliness, and we have found that the answer is community.”

— Dorothy Day

As we reflect on our past, it is fair to note that every calendar year contains its own collection of historic moments. Instances both good and bad that carry such enormous weight within our community that they will forever define a given day, season or year. Despite this trend of living history in some way every year, 2020 felt unique when considered against our more recent past. This was due in large part to the overall number of once-in-a-generation and once-in-a-lifetime events that converged over the span of a few months. But there was a second factor at work that will forever make 2020 stand out in our collective memory.

By definition, the safety guidelines in place to slow the spread of COVID-19 brought isolation to individuals, friends and families from one another. This was necessary based on all available scientific data, but it also addressed one crisis by creating a second—the loss of community.

When we look back on those historic moments of previous years, a common factor is how we turned to one another in celebration or sorrow. We found strength by connecting, supporting or just being with one another, be it discussing the news with a close friend over coffee, bonding with coworkers as challenges unfolded during a workday or gathering with neighbors, family or a faith community. In 2020, these methods of connection were short circuited or largely taken away.

One of the great joys of our work at the Murdock Trust is having a front row seat to watch how organizations serving a diverse array of individuals, families and communities throughout our region can find innovative, nimble, culturally and contextually appropriate solutions to emerging challenges. Over the

course of 2020, we were awed and inspired as we saw so many nonprofits rapidly pivot and adapt their programs to ensure that they could safely retain their connection to the individuals and families they serve, creating a remarkable sense of community in new ways. This report contains only a small sample of the myriad examples of this tireless commitment at work.

As I reflect on the work of 2020, I am also grateful for the team we have here at the Murdock Trust and the partners who help support our work by listening carefully and interacting regularly with us and those we serve. I am proud of how we were able to join the nonprofit, philanthropic, business, government and faith-based communities in rapidly adapting our grantmaking, our enrichment programs and our overall business strategy to find meaningful ways to help invest in building the capacity of the individuals and organizations on the front lines of these historic needs, as well as those looking ahead to the needs that have and will ripple for some time to come.

As the honorable John Lewis once said, “If you come together with a mission, and it is grounded with love and a sense of community, you can make the impossible possible.”

On behalf of the entire Murdock Trust team, we salute and say THANK YOU to those who continue to serve the common good!

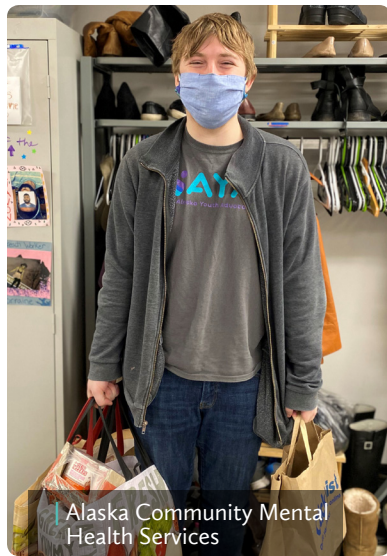

Steve Moore

Oregon Food Bank

Throughout 2020, the unthinkable became the commonplace. Early in the year, our Trustees recognized that the communities we serve would need both immediate support for urgent matters as well as continued support for long-term recovery and healing.

They committed to continue our quarterly grants program at full strength, providing support for organizations working to ensure every individual, family and community has an opportunity to flourish and thrive. They also agreed that the Murdock Trust would provide additional emergency support to targeted organizations serving on the front lines in response to these historic challenges.

COVID-19 Emergency Support Grants

As awareness of the COVID-19 pandemic grew, staff identified several sectors of service that aligned with the Murdock Trust's core mission. Working in real time to adapt our existing grant application to a more streamlined process, staff were able to deploy more than \$15.3 million to organizations serving on the front lines of the pandemic, from scientific researchers seeking to understand the virus to health-care professionals treating those who were ill to food banks helping ensure no family would go hungry as a result of economic challenges to so many more outstanding organizations serving in diverse ways.

Emergency Fire Relief and Rebuilding Support

Communities already struggling against the backdrop of the COVID-19 pandemic were dealt another heartbreaking blow as summer drew to a close. Wildfire season is an anticipated occurrence every year along the West Coast. However, a hot, dry August was followed by days of historic winds. While often contained to more rural areas of the state, blazes in Oregon rapidly grew to historic levels and spread into densely populated urban and suburban communities, forcing tens of thousands to evacuate. Leveraging the framework we developed in our COVID-19 response, the Murdock Trust contributed \$680,000 to a collection of nonprofits offering frontline support and resources to those impacted by the tragic fires.

We remain grateful to the multitude of individuals and organizations that have put their own safety and well-being at risk throughout this year to provide support to individuals and families most in need.

ENRICHMENT

I have found great joy in meeting many of you during my first year at the Murdock Trust, learning more about your thoughtful public service and ways you have displayed an entrepreneurial spirit and steadfastness as you serve the community. In working with you, we have encountered tremendous delight and genuine pride. The Murdock Trust invests in you and your organizations for a simple reason: you are the shapers, creators and preservers of the core convictions which the Trust holds dear.

Here at the Trust, we are reminded of the reliable dictum that if all politics are local, the greater good must be too. Our mission at Murdock is not Waiting on the World to Change. We see positive change happening every day because we see you and what you are doing. What you do here in Oregon, Washington, Idaho, Montana and Alaska occupy most of our hopes, and when you deliver on your promises to your constituents, the global village will increasingly look our way for inspiration. You are feeding the poor, investing in local economies, running venerable institutions of higher education and so much more.

During 2020, each of you has been asked by your constituencies to engage in downhill skiing on unfamiliar peaks. Your slalom courses required you to clock new speeds around each turn and face new obstacles. It is our desire to offer both new and ongoing Enrichment programs to tackle these difficult and persistent challenges. In 2020 we were able to offer 19 new trainings and webinars in addition to moving all traditional Enrichment programming online. Other highlights included launching rapid response executive coaching to directors leading 200 faith-based organizations. We listened and encouraged as we heard these leaders process time-sensitive decisions, new strategies, cancelled galas and new fundraising efforts, expanded communication to constituents and care for their organizational teams. We hope the trainings, convenings, conferences, leadership cohorts and programs we offer can help continue to strengthen and equip you and your team as you continue to race. From putting on sneakers to crossing the finish line, it is an honor to partner with you.

PRINCE WILLIAM SOUND SCIENCE & TECHNOLOGY INSTITUTE

Since its founding in 1989, Prince William Sound Science Center has served as one of the world's greatest living laboratories studying global change in the waters of the Gulf of Alaska. Through studying oil spill recoveries, changing fisheries, warming oceans or melting glaciers, the Prince William Sound Science Center helps build the knowledge for a more resilient future. Recently expanding its campus and reach, a Trust grant supported the construction of an administrative, research and education building on this new campus.

OUTER COAST

Located in Sitka, Outer Coast provides a five-week summer seminar to a diverse group of high school juniors and seniors to engage in intensive, college-level courses in the humanities, physical and social sciences, Tlingit language and indigenous studies. Students also spend 20 hours each week completing large-scale service projects with local nonprofits. Outer Coast prioritizes students who are historically left behind, especially Alaska Natives and rural Alaskans. A Trust grant supported the addition of new staff to expand into a year-round, post-secondary program.

ALASKA STATE FAIR

For more than 80 years, the Alaska State Fair has been the state's largest annual event, attracting more than 300,000 fairgoers from across all areas of the state each year for the 12-day event. Working to provide a center for the community to gather in a dynamic and safe atmosphere, the Fair aims to create statewide outreach, partnerships within the community and be a consistent economic contributor to the state and small businesses. To support the Fair's long-term service to the state, the Trust provided a grant to support the rehabilitation of existing historic structures.

ALASKA BEHAVIORAL HEALTH

Providing therapy, case management and medical services centered around communities, Alaska Behavioral Health focuses on improving the lives of its clients through exceptional behavioral healthcare. To support its expanding work, the Trust provided a grant to help purchase a new facility. This new space will support its growing initiatives as well as provide space for a youth drop-in center.

MAT SU YOUTH HOUSING

Founded in 2010, Mat Su Youth Housing serves youth who are living on the streets in Wasilla. Every year it serves 550 youth through transitional housing, job training and case management. In addition to transitional housing, it runs a drop-in center with two job training businesses to employ youth. A Trust grant helped Mat Su Youth Housing to purchase and renovate a building to be the new location of this drop-in center.

IDAHO

Photo: Porter Raab

MCCALL ARTS & HUMANITIES COUNCIL

McCall Arts and Humanities Council works to nurture a community rich in culture through educational opportunities like a children's theater program, placing local artists in elementary classrooms and creative classes for children and adults. Through the Trust's capacity building support program, the Council is working to build its fundraising infrastructure that will in turn build its organizational capacity and help it offer more programs.

WINTER WILDLANDS ALLIANCE

Based in Boise, Winter Wildlands Alliance is a national organization with the mission of protecting and preserving winter wildlands and the quality of human-powered snow sports experience on public lands across 13 states. Ever-increasing threats to our public lands and wild snowscapes necessitate a paradigm-shifting increase in the Alliance's ability to mobilize its community to make a difference and to speak out in defense of the places they love. A membership director was hired to achieve this goal through the support of a Murdock Trust grant.

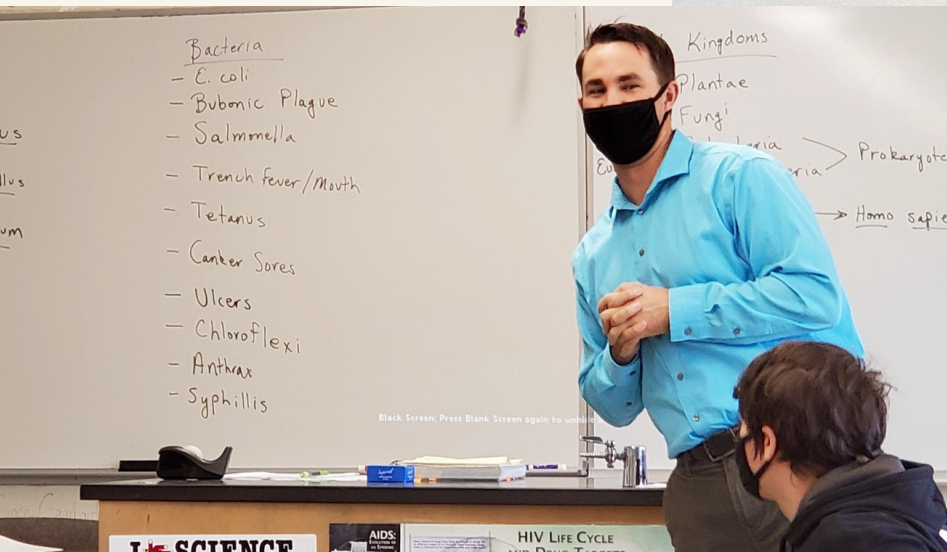

CARIBOU MEMORIAL HOSPITAL

Caribou Memorial Hospital serves more than 7,000 residents in the rural area of Soda Springs. A CT scanner is an effective management tool to determine when surgeries are necessary, reducing the need for exploratory surgeries, improving cancer diagnosis and treatment and guiding treatment of common conditions such as injury, cardiac disease and stroke. The hospital's CT scanner needed an upgrade, and a Murdock Trust grant helped purchase a new machine. One of the initiatives of the project was lowering dosage on pediatric patients to better serve children with medical needs.

COLLEGE OF IDAHO

Located in Caldwell, the College of Idaho is a private liberal arts college with a student body of about 1,200. The College is recognized for its excellence in the natural sciences and has a well-supported undergraduate research program. As part of a long-term plan to build a campus-wide infrastructure to support undergraduate research, a Murdock Trust grant helped the College purchase a liquid chromatography-mass spectrometer system, which will support researchers across departments.

BOISE STATE UNIVERSITY

Prostate cancer is the second-leading cause of cancer-related deaths in men in the United States and is lethal due to its metastasis to other organs in the body. Inflammatory proteins may cause metastasis, and the development of drugs that targets these proteins could lead to new therapeutics. Through the Murdock Trust's Partners in Science program, high school teacher Christian Jones will work with a researcher at Boise State University to conduct this research and bring it back to his high school classroom.

MONTANA

Photo: Steven Cordes

ALBERTA BAIR THEATER

The Alberta Bair Theater, located in downtown Billings, is the largest performing arts center in Montana, presenting outstanding local, national and international live performances to residents of south-central Montana and northern Wyoming. Its 1,400-seat theater presents about 120 public and school performances each year, drawing nearly 100,000 people annually. The Trust supported the Theater's capital campaign to add restrooms to accommodate those with special needs, expand the lobby for better audience flow and update concessions, elevators and the ticket office.

DAHL MEMORIAL HEALTHCARE ASSOCIATION

The Dahl Memorial Healthcare Association is a nonprofit critical access hospital for a remote section of southeastern Montana, located in Carter County, Ekalaka. Because of the geographic isolation and long distances between towns and healthcare, Carter County is designated as a Primary Care Healthcare Shortage Area. When Dahl Memorial was in need of updated medical equipment, the Trust provided a grant to fund these new machines. These updates are integral to providing the best care to patients throughout southeast Montana.

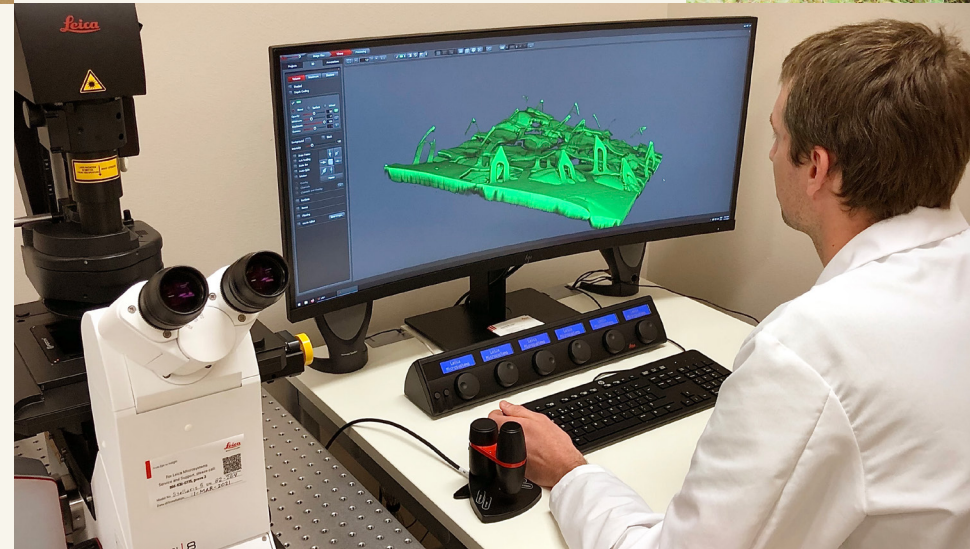

CHILD BRIDGE

Child Bridge works to support children who have suffered abuse or neglect. Working closely with the state and other agencies, Child Bridge finds and supports families who provide the safety and stability that these children so desperately need. Looking to expand Child Bridge's operations and open a regional office in Helena in 2021, a Trust grant helped hire new staff, ultimately equipping more foster families to care for abused and neglected children in Montana.

MONTANA STATE UNIVERSITY BILLINGS (INSTITUTE FOR NEURODIVERSITY)

Montana State University Billings serves more than 4,400 students through the College of Liberal Arts and Social Sciences, the College of Health Professions and Science, the College of Business, the College of Education and the City College. MSU Billings is in the process of establishing an Institute for Neurodiversity clinic to serve children with mental, social and behavioral challenges and learning differences associated with autism spectrum disorders (ASDs), developmental disabilities, anxiety disorders and other behavioral disabilities. The Trust helped fund the clinical and external facing portions of this Institute.

UNIVERSITY OF MONTANA

Currently, no critical emergency large surface skin wound management products are available for first responders. University of Montana researchers aim to advance a versatile bioengineered large skin wound management system formulated from natural biomaterials to feel and look like skin and enhanced with additional design features to promote wound healing, suture-free fixation and to enable localized drug delivery. The Murdock Trust's Commercialization Initiation program provided funding to support the commercialization of the university's wound management system and bring it to market.

Photo: David Merrick

PLAYA

Since the founding of PLAYA's residency program in 2011, PLAYA has hosted hundreds of nationally and internationally accomplished artists and scientists, free of charge, on its 55-acre campus in the remote "Oregon Outback." On the shores of ephemeral Summer Lake, PLAYA gifts time and space for artists to do deep work in this region's silence and beauty. A Trust grant supported the upgrade of the print-making studio, allowing better lighting, more space and better surfaces.

ASIAN HEALTH & SERVICE CENTER

For more than 40 years, the Asian Health and Service Center has served the needs of the Asian immigrant community by providing physical and mental health care, cultural and educational programming and social services. Cancer is the leading cause of death among Asian Americans, and AHSC has identified a significant gap in cancer education, prevention and access to medical care. A Trust grant helped establish an Asian Cancer Resource and Support Center to fill this need.

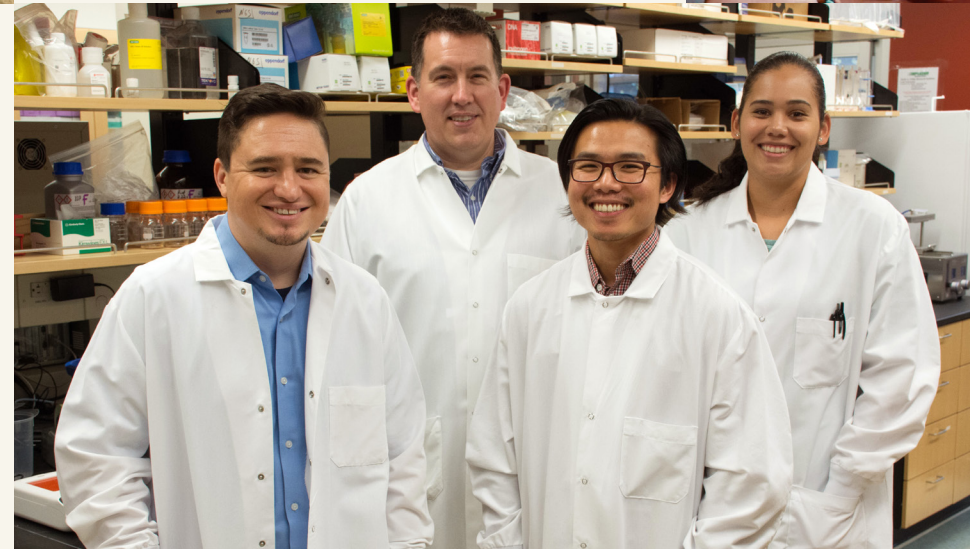

CHILDREN'S LITERACY PROJECT

Believing that literacy creates systemic and comprehensive change, Children's Literacy Project activates volunteers from faith communities with school-approved reading programs. Early literacy improves high school graduation rates and prevents prison, poverty, addiction and other negative outcomes. With help from a Trust grant, CLP will create a documentary to inspire people to volunteer to help children at marginalized and under-resourced schools to learn to read.

IN4ALL

In4All mobilizes community, bringing local businesses and schools together to provide real-world, hands-on learning experiences that expand opportunities for students who are historically underserved to engage in their education. Through elementary, middle and high school programming, In4All works to expand STEM opportunities throughout Oregon. A Trust grant helped hire new staff to expand this work into southeast Portland.

PROVIDENCE PORTLAND MEDICAL FOUNDATION

The Earl A. Chiles Research Institute at Providence Portland Medical Center performs cancer research, and its primary area of research is immunotherapy, focusing on triggering the immune system to fight cancer. Despite the improved level of success, current immunotherapies are effective in only 20 to 40 percent of patients with certain types of cancers and mostly ineffective in other cancer types. To provide personalized cancer immunotherapy, researchers and medical teams need to have the data from the detailed molecular characterization, and a Trust grant funded three new instruments to further this study.

WASHINGTON

| Photo: Dave Hoefler

SEATTLE UNIVERSITY

Through the Murdock Trust's Partners in Science program, a researcher at Seattle University will investigate how the quantity, quality and connectivity of urban green spaces affect beneficial insects in community food gardens. The findings of this project will increase understanding of how these organisms survive and persist in highly disturbed and fragmented urban environments. Since beneficial insects provide important ecosystem services for food production, like pollination and natural pest control, these findings could contribute to mitigate urban biodiversity loss and improve human well-being.

SUMMIT ASSISTANCE DOGS

Summit Assistance Dogs trains and provides highly skilled mobility assistance dogs for people living with disabilities in the Pacific Northwest. By assisting with tasks such as retrieving items, opening and closing doors, turning switches on and off and tugging off clothing, Summit Assistance Dogs has helped more than 100 partners live with greater independence and confidence. With more than 20 years of success, Summit Assistance Dogs is expanding into a new campus through the support of a Murdock Trust grant.

TACOMA LITTLE THEATRE & DANCE LEAGUE

Founded in 1918, Tacoma Little Theatre's mission is to enrich the community through all types of quality live theater experiences, embracing professional standards of excellence and utilizing the performing arts as a means of building community. For the past 100 years, the Theatre has provided its community with seven mainstage productions each season. A Trust grant helped the Theatre improve its seating for longstanding patrons.

BLACK PILOTS OF AMERICA

Established in 1997, Black Pilots of America works to train youth for employment in the field of aviation, stimulate and encourage broader job opportunities and develop scholarships and schools for aviation training. The Red-Tailed Hawks Aviation Academy, a program started by Black Pilots of America, focuses on educating individuals from underrepresented communities and has established a student-to-pilot pipeline. To expand this pipeline, Black Pilots of America recently acquired two single-engine aircrafts with the support of a Murdock Trust grant.

FEIRO MARINE LIFE CENTER

Feiro Marine Life Center in Port Angeles provides marine and watershed learning experiences through its waterfront aquarium and exhibit space, educational programs for children and animal support programs. The Center will be part of a new Marine Discovery Center in partnership with other marine organizations, and a Murdock Trust grant helped hire a development director to increase capacity.

NATIONAL + BRITISH COLUMBIA

Photo: Rohit D'Silva

EASTGATE CREATIVE

Eastgate Creative is a nonprofit film production company that is committed to telling great stories about individuals that stir the moral imagination. Its first documentary film series is *A Hobbit, a Wardrobe and a Great War*, which tells the story of how two world wars shaped the lives and literary imaginations of two famous friends, J.R.R. Tolkien and C.S. Lewis. A grant from the Murdock Trust allowed Eastgate to complete the first episode of the series.

AMERICAN INDIAN GRADUATE CENTER

For more than 50 years, American Indian Graduate Center has provided scholarships for American Indian and Alaska Native students to attend undergraduate, graduate or professional degree programs. A Murdock Trust grant helped hire a program manager to launch a new academic support program to provide mentors to the Center's undergraduate and graduate scholarship students attending school in the Pacific Northwest.

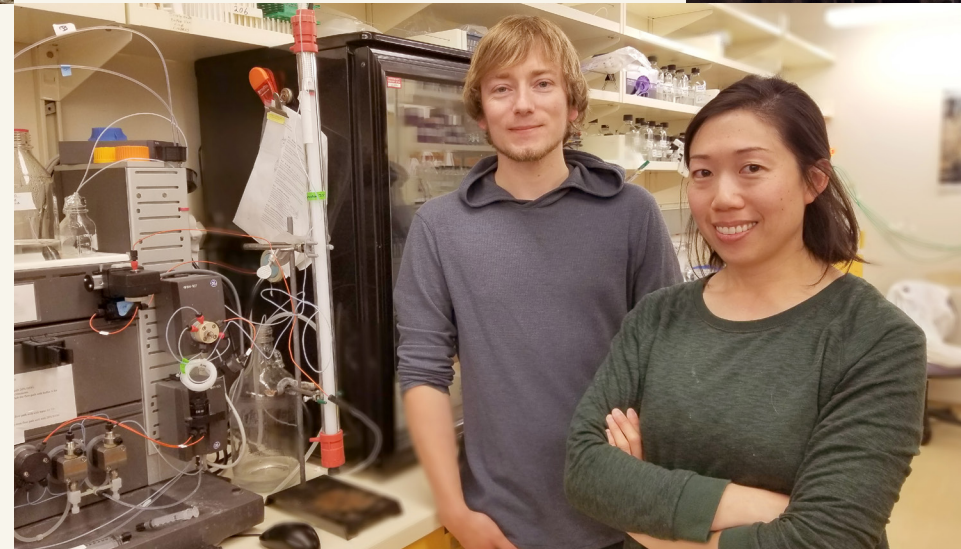

4WORD

First launched in Portland, Oregon, in 2011, 4word is now a national ministry serving women of faith in the workplace. 4word works to narrow the gap in resources for women seeking to integrate their careers, relationships and faith by providing an authentic community through local group gatherings, mentoring relationships and relevant digital and print content. A Trust grant helped 4word upgrade its technology suite to remove inefficiencies and improve its workflow.

BEST BUDDIES INTERNATIONAL

Best Buddies International creates opportunities for individuals with intellectual and developmental disabilities to more fully participate in their communities through one-to-one friendships, leadership development, integrated employment and inclusive living. A national organization looking to expand to the Pacific Northwest, Best Buddies needed a director of mission advancement to bring this impactful organization to Washington. A Murdock Trust grant supported the creation of this position.

UNIVERSITY OF BRITISH COLUMBIA

Investigators at University of British Columbia have discovered novel enzymes in the human gut microbiome that may have utility to convert Type A blood into Type O, the universal donor blood type. The Murdock Trust's Commercialization Initiation program provided funding to support the commercialization of this discovery and translate it to market. With Murdock Trust funding, if successful in the development of this process, the university's invention could have a significant impact on blood banking.

AMY DICKERSON | Program Coordinator for Enrichment Initiatives
 On quite literally the day after the Murdock Trust closed its doors due to orders related to the COVID-19 pandemic, we welcomed Amy Dickerson to our Enrichment team. Her wisdom, expertise and skills have been a great blessing to the Murdock Trust from day one as she was able to dive into the deep end and help launch and support a variety of virtual programs to serve the nonprofit community during an historic time.

SHANNON HENDRICKS | Oregon Fellow
 Joining the Murdock Trust in fall 2020, Shannon Hendricks provided invaluable support to a variety of efforts, including work with our Enrichment, Communications and Investment teams, as staff worked to serve the historic needs of our community.

JERRY CALHOUN | Senior Fellow
 A 30-year professional in the human resources field with roles at Boeing, Bristol-Myers and in the Ronald Reagan Presidential Administration, Jerry Calhoun joined the Murdock Trust as a senior fellow helping support work and partnerships with the Pacific Northwest business community.

HAROLD SMITH | Visiting Fellow
 President emeritus of *Christianity Today*, Harold Smith joined the Murdock Trust as a visiting fellow with an emphasis on supporting collaboration within the faith-based community.

DAN RYAN | Visiting Fellow
 Prior to running a successful campaign for Portland's City Council, Dan Ryan served as a visiting fellow with the Murdock Trust, leveraging his years of executive experience in the nonprofit space to help guide and curate support for board and leadership development needs.

VICTOR SHELDON | Visiting Fellow
 A veteran of the Navy and Marine Corps for more than 30 years, Victor Sheldon joined the Murdock Trust as a visiting fellow to help inform and guide our outreach to and support of organizations that serve active-duty military personnel, veterans and their families.

ELMER HUH | Appointed to Oregon Growth Board
 Murdock Trust Chief Investment Officer, Elmer Huh was appointed to the Oregon Growth Board, an organization that oversees two sources of investment capital for the state, with a specific emphasis on funding opportunities that benefit Oregon-based businesses and organizations.

“It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness, it was the epoch of belief, it was the epoch of incredulity, it was the season of light, it was the season of darkness, it was the spring of hope, it was the winter of despair.”

No doubt, had Charles Dickens been alive over the past 14 months, he would have updated his classic *A Tale of Two Cities*. We felt it logical to quote Dickens here to sum up how we felt about 2020 and the state of the markets with respect to our portfolio.

The Trust’s liquid portfolio started out strong and then declined in March in response to the outbreak. We had always expected an imminent recession but were unsure as to when. The declines were significant and swift but also short lived. Like others, the Trust’s liquid portfolio experienced positive performance, for the most part, from May onward due to several factors, including a strong adaptation of technology and innovations to accommodate shut down conditions coupled with a desire for the economy and country to quickly return to normal. 2020 was not without its chaotic political, economic and capital market landscape, but growth was mainly attributed to accelerated technological innovation and adoption (e.g., Zoom is now the platform to conduct meetings). Public equities, especially in the

| Vital Ground Foundation

growth category, provided one of the largest and highest rebounds in history, pushing further the notion that we are in heightened territory and perhaps a peak point for irrational exuberance. Fixed income strategies, on the other hand, offered challenging performances throughout, a response no doubt to ultra-low rates, a generous federal stimulus and the uncertainty of global central banks’ responses to the pandemic.

The Trust’s overall portfolio outperformed also due in large part to the proliferation of IPOs and increases in valuation in its private portfolio allocation. We have echoed this sentiment in years past, but the surge in alternatives owed its positive performance to a long-held position of being principle-based, keeping a long-term perspective and understanding that cycles come and go. The Trust’s alternative strategies turned in high performances in programs invested in long before 2020, particularly in venture capital. Investing in alternatives takes a considerable amount of time, effort and patience before any expected potential realization can occur, and 2020’s realizations were a direct function of those disciplines.

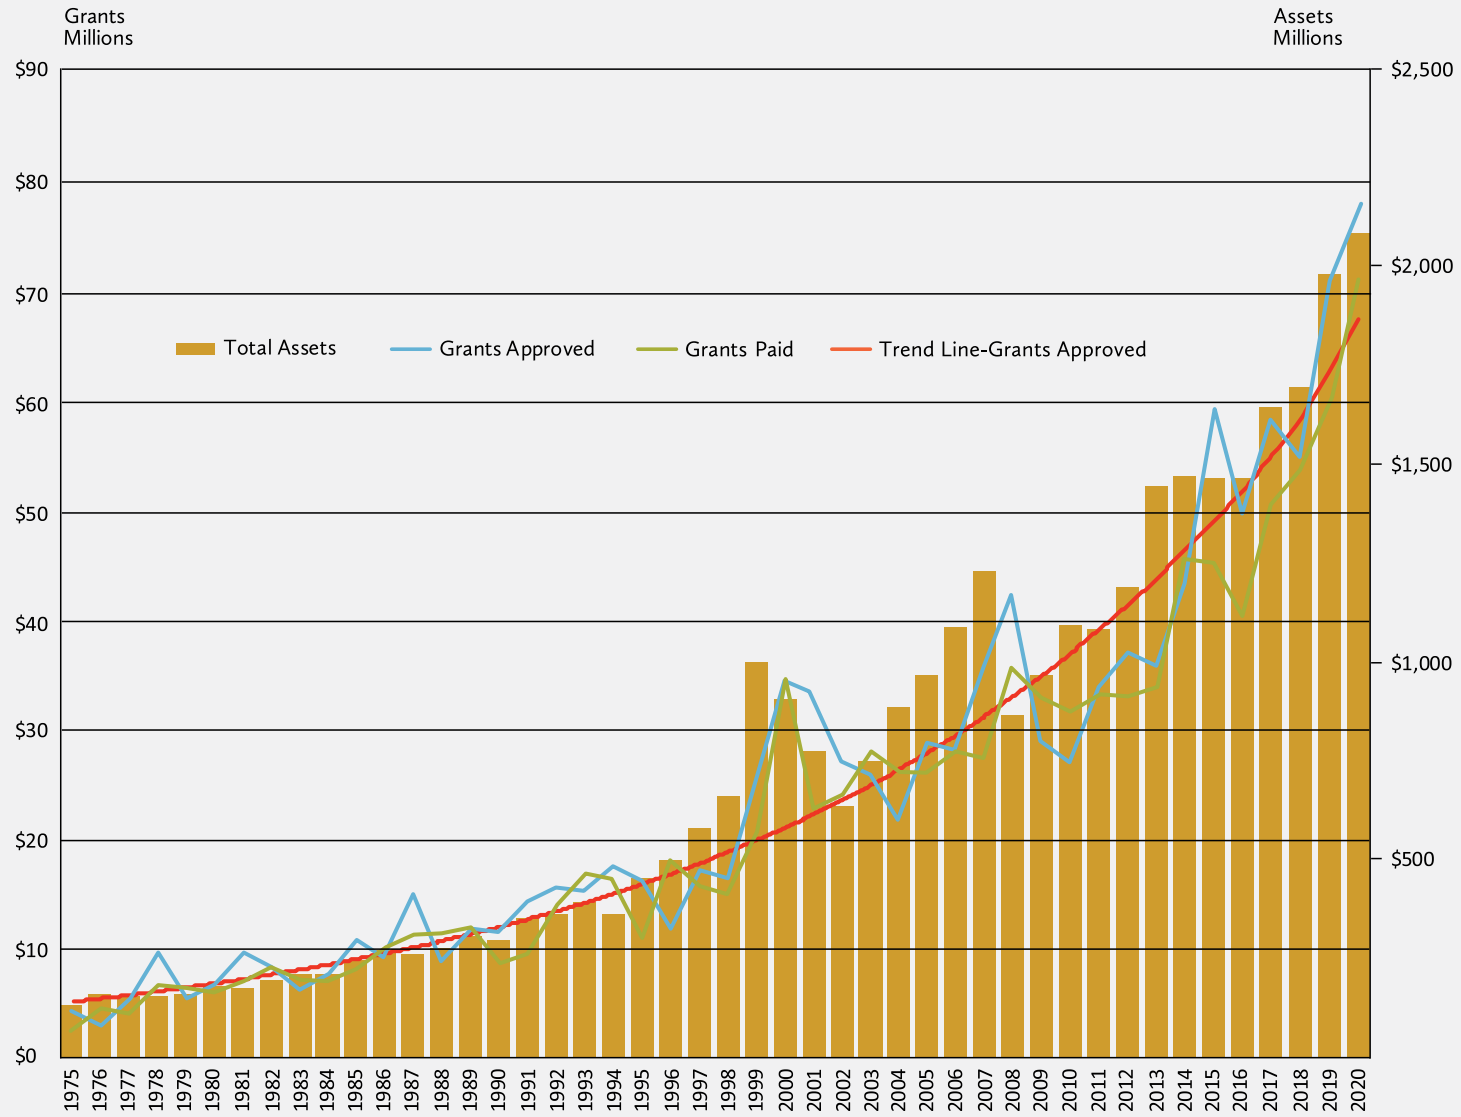

As we always do in the year-end reflection, we owe a debt of gratitude to each of our investment managers. Our nonprofit partners have again benefitted from our managers’ hard work and discipline. To put it bluntly, we have heard from managers over the recent past that selectivity remains a key ingredient in achieving consistent and positive outperformance. Each investment manager remained disciplined in their core strategy throughout the year, even during the low points of the pandemic and with patience not only protecting our assets but also growing them. We are thankful for each of our investment managers.

Our portfolio is managed for the long run, but we remain committed to the principle belief that we cannot be complacent but rather continue to test and address areas where we are exposed, seek growth opportunities, reinforce our governance where necessary and be prepared to pivot toward long-term secular changes. Uncertainty lies ahead as it always does, but we remain committed to be principally driven and steadfast in holding the long run in mind.

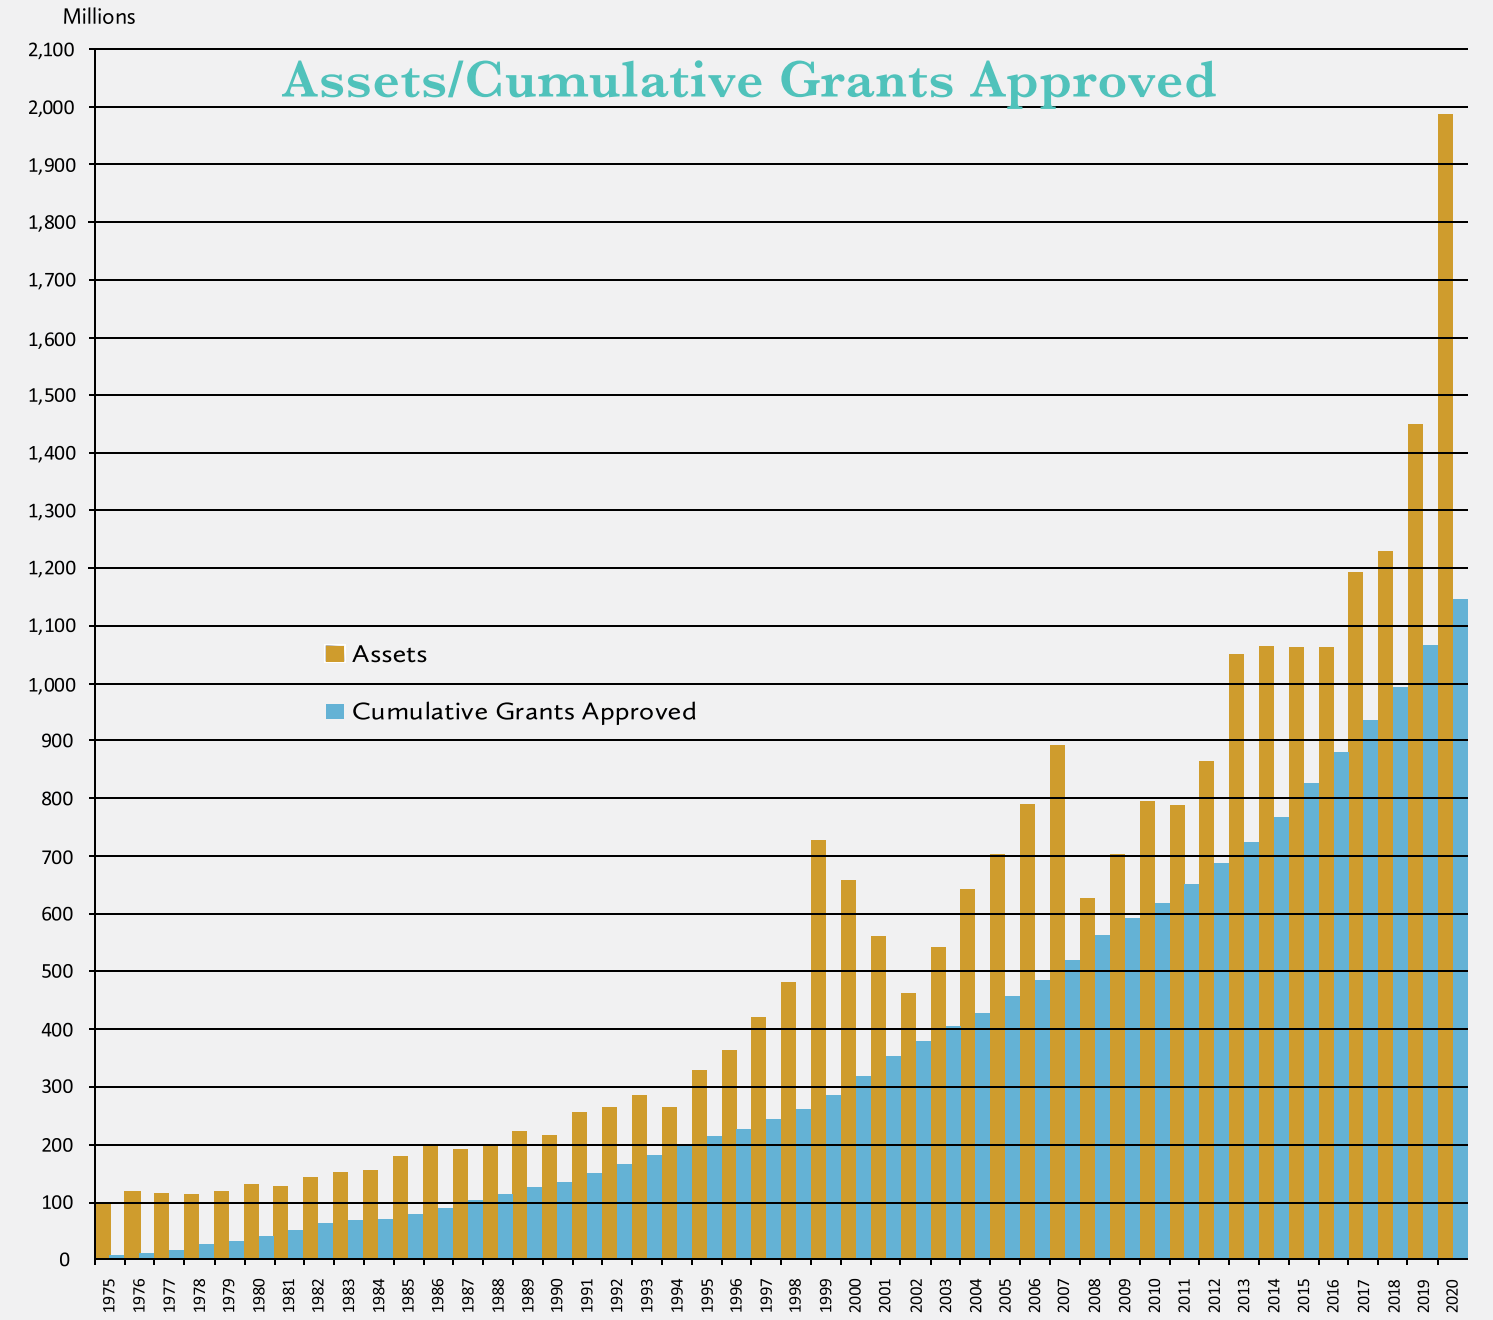

Elmer Huh
Chief Investment Officer

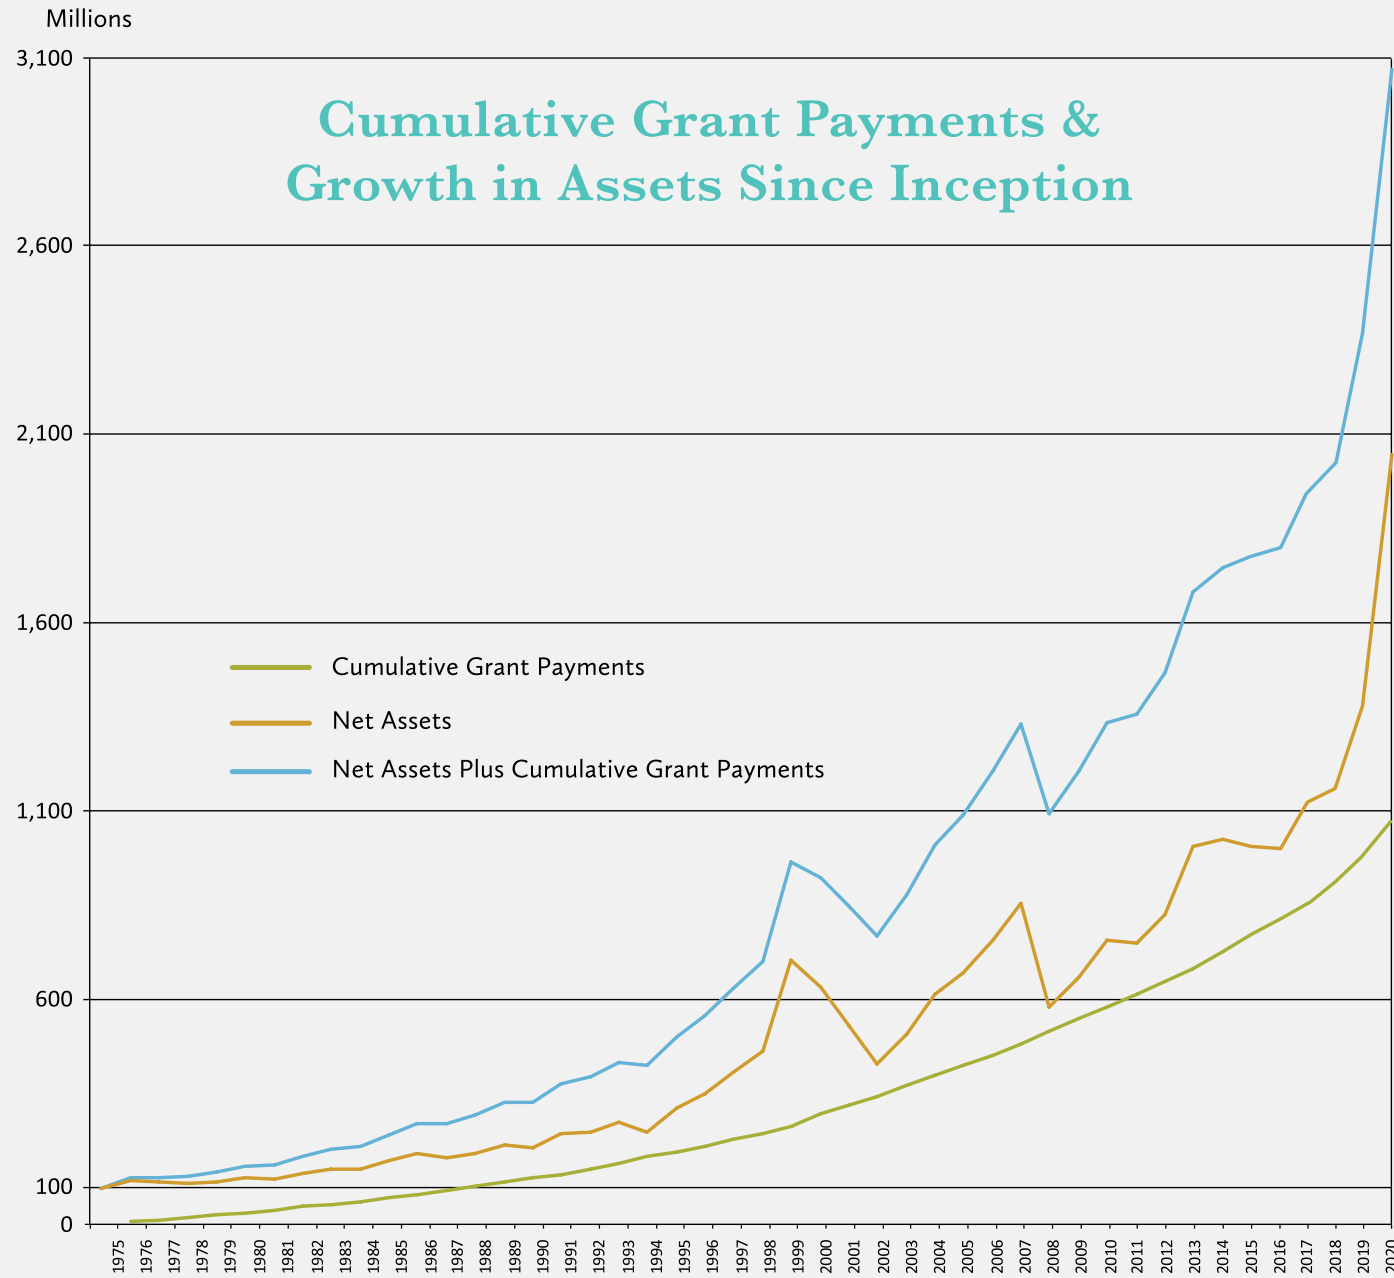

Total Assets, Grants Approved & Grants Paid

Assets/Cumulative Grants Approved

The Murdock Trust divides all potential investments into three “Buckets”:

- Bucket 1 – low risk/return
- Bucket 2 – medium risk/return
- Bucket 3 – high risk/return

The Trust considers all types of investment products – without preconceived ideas or built-in biases – for all three Buckets. Our investment objectives follow directly from this three-Bucket allocation strategy. For more information on this strategy, click here: murdocktrust.org/investments.

TARGET ALLOCATION

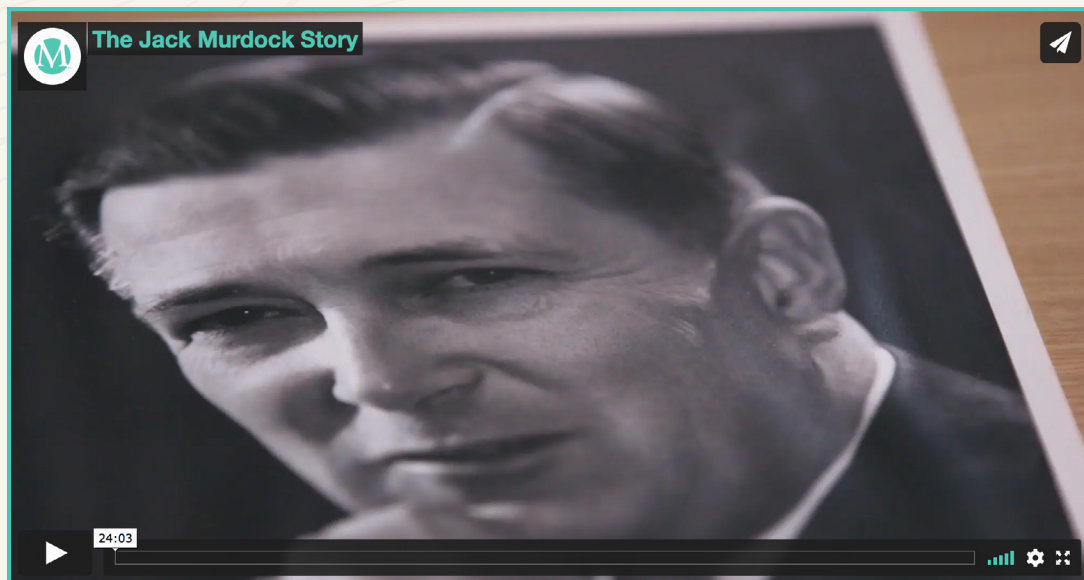

MEET JACK MURDOCK

The late Melvin J. “Jack” Murdock, co-founder of Tektronix, Inc., was an entrepreneurial leader with business interests throughout the Pacific Northwest. Born and raised in southeast Portland, Jack turned a passion for radio and electronics repair into one of the largest employers in Oregon’s history through innovation and a commitment to building a workplace where his team could thrive.

Upon his untimely death in 1971, his will directed three Trustees to establish a charitable trust “to nurture and enrich the educational, cultural, social and spiritual lives of individuals, families and community.”

In this short-form documentary, we learn how a soft-spoken, humble young man would grow up to revolutionize the technology world and establish a legacy that continues to ripple decades after his passing.

Mapping and Modeling to Forecast Ecosystem Recovery after Megafires in Sagebrush Steppe
 For Partners in Science Program

| Washington State University

| Oregon State University

Delta High School | Pasco, WA | \$9,154
Zebra-Fish Husbandry as a Pathway to Increase Engagement with Mitosis, Meiosis, Environmental Impacts, and Embryonic Development • For Partners in Science Supplemental Program

Gonzaga University | Spokane, WA | \$60,000
Structure and Thermodynamics of Cucurbituril-Peptide Complexes: Toward the Development of On-Demand Supramolecular Protein Dimerization Domains
 For Murdock College Research Program for Natural Sciences - Physical Sciences

Gonzaga University | Spokane, WA | \$59,523
Aminoxide Ligands to Cooperatively Support Transition Metal Catalyzed Oxidations
 For Murdock College Research Program for Natural Sciences - Physical Sciences

Gonzaga University | Spokane, WA | \$19,000
Experimental Determination of Mechanical Properties for Point Loaded Glass • For Partners in Science Program

Hillsboro High School | Hillsboro, OR | \$10,000
Quality Control Biochemistry: Confirming the Presence and Purity of Proteins Produced in Biomanufacturing
 For Partners in Science Supplemental Program

Idaho State University | Pocatello, ID | \$19,000
Identifying Subclass and Activation Patterns of Autoantibodies • For Partners in Science Program

International School of Beaverton | Beaverton, OR | \$10,000

Dynamic Nature of Science--An Investigation into the Epigenetics of the PTC Bitter Tasking Gene (TAS2R38)

For Partners in Science Supplemental Program

Kamiak High School | Mukilteo, WA | \$10,000

Can You Dig It?: Opportunities for Biotech and Forensic Science Student Collaboration in Studying

Soil Bacteria from a Mock Crime Scene • *For Partners in Science Supplemental Program*

Kennewick School District | Kennewick, WA | \$19,000

Cosmic Ray Exposure of Dark Matter Detectors • *For Partners in Science Program*

Lewis and Clark College | Portland, OR | \$60,000

Molecular Mechanisms of Transcription Regulation in Pluripotent Stem Cells

For Murdock College Research Program for Natural Sciences - Life Sciences

North Bend High School | North Bend, OR | \$10,000

Effect of Ocean Acidification on Brine Shrimp: A Student-Driven Science Inquiry Project

For Partners in Science Supplemental Program

North Central High School | Spokane, WA | \$10,000

Effect of a Project-Based Curriculum on Gene Expression on High School Student Self Efficacy in STEM

For Partners in Science Supplemental Program

North Pole High School | North Pole, AK | \$10,000

Biotechnology and Forensic Anthropology Lab Activities • *For Partners in Science Supplemental Program*

North Pole High School | North Pole, AK | \$10,000

Spectrophotometry: Applications in Chemistry & Paleontology: Birds of a Feather?

For Partners in Science Supplemental Program

Oregon Health and Science University | Portland, OR | \$19,000

Sulfated Hyaluronan for the Promotion of Remyelination • *For Partners in Science Program*

Oregon Health and Science University | Portland, OR | \$19,000

Mechanisms Underlying Age-Associated Brain Pathology • *For Partners in Science Program*

Oregon Health and Science University | Portland, OR | \$19,000

Investigating the Effects of Long-Term Alcohol Use on the Sperm's Epigenome • *For Partners in Science Program*

Oregon State University | Corvallis, OR | \$48,855

Optimization of a Thermal Compressor to Convert Low-Grade Energy to High-Grade Mechanical Work

For Commercialization Initiation

Pasco School District #1 | Pasco, WA | \$19,000

Understanding Nepheline Crystallization in Waste Glasses • *For Partners in Science Program*

Portland State University | Portland, OR | \$19,000

Investigating Possible Biological Controls for English Ivy (Hedera helix) • *For Partners in Science Program*

Portland State University | Portland, OR | \$19,000

Gelatinous Zooplankton Feeding on Microbes • *For Partners in Science Program*

Renaissance High School | Meridian, ID | \$4,000

Planning and Conducting Investigations That Emphasize Separating Solutions

For Partners in Science Supplemental Program

Seattle University | Seattle, WA | \$59,970

Effect of the Abundance, Quality, and Connectivity of Green-Spaces on Beneficial Insects in Urban Community Gardens • *For Murdock College Research Program for Natural Sciences - Life Sciences*

Seattle University | Seattle, WA | \$60,000

Identifying Molecular Mechanisms of Lactobacillus Colonization in the Vaginal Microbiome

For Murdock College Research Program for Natural Sciences - Life Sciences

Sentinel High School | Missoula, MT | \$10,000

Utilizing a Climate-Controlled Greenhouse for Implementing NGSS Standards and Cross Curricular Plant/Food Research • *For Partners in Science Supplemental Program*

Southridge High School – Kennewick | Kennewick, WA | \$10,000

Increasing Student Engagement in Scientific Inquiry Investigations Using Data Incorporation Technologies to Study Cellular Energy Pathways • For Partners in Science Supplemental Program

University of Alaska Fairbanks | Fairbanks, AK | \$19,000

Evaluating Shifts in Microbial Community Structure Associated with Phytoremediation of Diesel-Contaminated Soil in Kaltag, Alaska • For Partners in Science Program

University of British Columbia | Vancouver, BC, Canada | \$44,000

Efficient Enzymes for Conversion of Type A Blood to Universal Type O Blood • For Commercialization Initiation

University of Idaho | Moscow, ID | \$19,000

Research on Streambed-Groundwater Exchange and on Sediment Motion in Mountain Streams
For Partners in Science Program

University of Idaho | Moscow, ID | \$19,000

Investigating Natural Selection Stemming from Environmental Conditions in Galápagos Endemic Land Snails
For Partners in Science Program

University of Idaho | Moscow, ID | \$31,115

A Holistic Climate Control System Using Infrared Cameras • For Commercialization Initiation

University of Montana | Missoula, MT | \$59,968

Advancement to Commercialization of a Bioengineered System for Skin Reconstruction
For Commercialization Initiation

University of Oregon | Eugene, OR | \$60,000

A Novel Test of Infant Hearing • For Commercialization Initiation

University of Oregon | Eugene, OR | \$19,000

Understanding Photovoltaic Reference Cell Biases • For Partners in Science Program

University of Portland | Portland, OR | \$19,000

Study of Marine Organisms and Soil Actinomycetes from an Archeological Site and Coastline of Mallorca
For Partners in Science Program

University of Portland | Portland, OR | \$36,000

Start-Up Research Package for New Position in Environmental Science

University of Portland | Portland, OR | \$60,000

Probing the Effects of Shear Stress on Coronary Artery Development to Determine How Developmental Defects Arise • For Murdock College Research Program for Natural Sciences - Life Sciences

University of Portland | Portland, OR | \$60,000

Investigating the Cell Division Regulator Haspin in *C. elegans* to Understand the Function of an Important Target of Chemotherapeutic • For Murdock College Research Program for Natural Sciences - Life Sciences

University of Puget Sound | Tacoma, WA | \$60,000

Determining the Seasonal Dynamics of Methane in the Sargasso Sea to Identify the Environmental Controls on Methane Production by Marine Microbes • For Murdock College Research Program for Natural Sciences - Life Sciences

University of Washington | Seattle, WA | \$19,000

Uncovering the Presynaptic Function of Autism Spectrum Disorder-Associated Protein GRIP1
For Partners in Science Program

University of Washington | Seattle, WA | \$19,000

Implications of Ocean Acidification and Deoxygenation for Plankton in Friday Harbor, Salish Sea
For Partners in Science Program

Washington State University Foundation | Pullman, WA | \$60,000

Drywall Blocks: Producing a Market-Ready Prototype for Waste-Based Interior Walls in Collaboration with Industry • For Commercialization Initiation

Whitman College | Walla Walla, WA | \$60,000

Bacteria to Building Blocks: Exploration of Substrate Specificity in Benzoate dioxygenase from *R. eutropha* Bg
For Murdock College Research Program for Natural Sciences - Physical Sciences

Whitworth University | Spokane, WA | \$60,000

Role of the Endocannabinoid System in Benefits of Fasting & Exercise in the SwLo Model of Depression & Epilepsy
For Murdock College Research Program for Natural Sciences - Life Sciences
